

ABSTRACT

This invention pertains generally to lighting decorations for structures such as homes, boats condo's or buildings. It is a modular fiber optic lighting system, which will be easily installed and can change themes for different holidays or occasions. It will be more energy efficient and safer than anything on the market today, with a more precise color changes and fewer light bulbs to change. It gives the owner more options of decoration than anyone system on the market, and can be used indoors or outdoors without the fear of fire because the fiber cables do not get hot or have any electrical wiring in them. The invention will also be available in many different sizes and designs so the owners can custom fit the system to how they want it to look.
